

Two dual module solutions, one great system.

R12

Elastic Staple™ Fastening System
powered by VNS

R9

The Dynamic Duo.

The Ramko R9 and R12 are the all-round stars from our standard semi-automated packaging solutions. They are the ideal solutions for companies wanting to embrace automation, achieve faster delivery times and reduce costs. These are the most popular machines globally across all retail industries and offer the following key benefits over our other solutions:

- Less investment than a fully automated packaging street but significantly faster and more flexible than other semi-automated solutions.
- Operators can seamlessly switch between the one or two staples per product function allowing all types of product regardless of size to be packed in the most efficient way.
- The two modules operate independently so that you can switch the modules to staple in different directions to each other and set-up each module with different staple lengths and the one or two shot setting. This is used when you have a heavier product or unusual shape which required two staples in one position and one in the other position.

This machine is fully adaptable to all retail markets and very popular with the following industries: toys, cosmetics, beauty products, kitchen utensils, cutlery, tools, bike parts and accessories like carabiners and key rings. The R9 and R12 have been specially designed for manufacturers with medium to high volumes and has two-hand actuation.

The difference between the R9 and R12:

One of the restrictions of the R12 is that the machine can only actuate 2 staples at the same time if the staple position is 8cm or wider apart due to the position of the modules. If users have products that require 2 staple positions closer than 8cm, the R9 is the perfect solution. The movable table allows operators to quickly and seamlessly attach one staple and move the table to the second position. This is quicker than moving the product to the second position which would be the solution using the R6 machine.

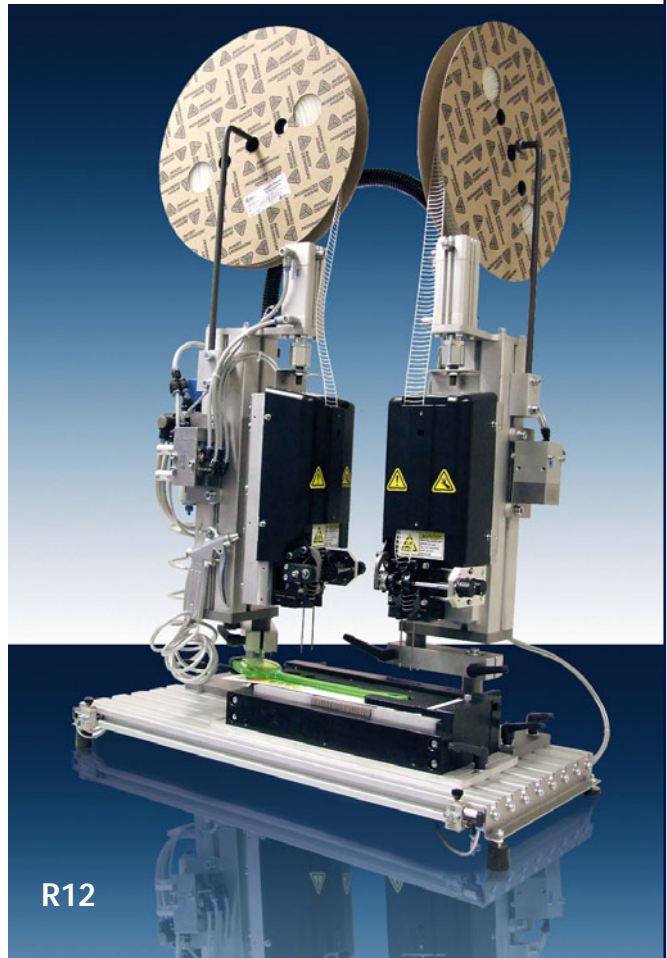

The R12 and R9 - The dynamic duo.

The VNS Packaging system is the perfect replacement for blister packing and cable ties or twist ties offering the following key advantages:

- Easy to set-up and use with Ramko's unique design – a true plug & play solution.
- Significantly faster than hand held solutions and much easier and less strenuous for workers to operate. (Packing speeds between 9-18 per minute for 2 staples depending on operator and products).
- More cost effective and environmentally friendly than blister solutions and allows the end customer to touch and feel the product.
- Offers significantly increased packaging speeds allowing you to deliver to your customers faster and reduce the number of staff and overhead.
- Helps reduce expensive packaging and packaging waste therefore reducing recycling fees.
- Eliminates the cost of pre-punching header cards and improves the visual display of the products.
- Products are easy to remove from packaging and the staples do not damage the products.
- Staples are available in a whole range of lengths, transparent and black version and are child-friendly.

The R9's movable jig allows for absolute positioning of any Elastic Staple

R12

With the Variable Needle System (VNS) and the wide range of staple lengths available, the R9 and R12 can package all your retail products. Variable jigs and moulds can be used to provide exact product positioning on your packaging for every product and there is no longer a need to purchase packaging or cards with pre-punched holes as the needles make the holes.

Ramko offer a free of charge sampling service, so please feel free to send your products to the nearest Ramko office and let us transform your packaging. All products will be returned, packed with the VNS Elastic Staple™ and a video to show how these were packed. We can also do drop testing to ensure the products are attached properly to avoid any issues during transportation and storage. Alternatively, Ramko are always happy to visit your company to introduce our packaging solutions and advise you on the optimal solution for your products. Ramko also offer all forms of packaging materials at competitive rates - please contact us for a quote or samples.
